Penetration Testing

A.A. 2025/2026

Assignment

Perform a VAPT analysis of the following Docker container: gabrielec/ptexam4

To download and launch the container execute the following commands

```
docker pull gabrielec/ptexam4
docker run gabrielec/ptexam4
```

Engagement rules

Analyze the target container, assuming it is a remote machine (black-box settings). The container is accessible at an IP address that depends on your Docker configuration. Typically, it is located in the subnet 172.17.0.1/24 (e.g., 172.17.0.2).

Reports

Reports must be submitted to gabriele.costa@imtlucca.it with the subject: **[PT2026 Exam] Name1 Surname1 (and Name2 Surname2)**.

Reports can be either written individually or in teams of 2 students. The authors of the report must be clearly identified in the report text.

Submissions will only be accepted **before November 2nd at 23:59.**

Submissions that do not satisfy these criteria will be desk-rejected. To be admitted to the oral exam, the submitted report must be rated "sufficient". To be sufficient, a report must present at least 1 confirmed vulnerability with a replicable test for each author.

Oral examination

The oral examination is mandatory. The final score will be assigned after the oral discussion.
